

Bucksport Energy Piling Contract

BUCKSPORT, MAINE

PROJECT HIGHLIGHTS

- Driving over 325 14-inch pipe piles in less than five weeks.
- This project represented a time-critical “first step” in fast-track construction of the Bucksport Energy Facility.
- Hauled and disposed contaminated soils at a low cost to owner.
- Worked closely with owner’s representative to calculate and order pile quantities to successfully avoid time delays.
- The contract required driving a significant number of pipe piles in a very short time schedule with a substantial liquidated damages penalty; Cashman finished it on budget and ahead of schedule.
